About Me

I have a huge passion for video games. This passion is the main reason behind my other passion for coding. I also really love animals, especially chameleons. I also love to draw even though I might not be the best at it I still love to do it. I also love to just be outside in nature. When I go out I always get distracted by nature and how pretty it is.

Projects

- **Mechanical Engineering Digital Portfolio**
 - This digital portfolio is a website using google sites.
 - This portfolio contains all my projects from my 2 years in the Mechanical Engineering Pathway.
 - Demonstrates skills such as circuit and AOI circuit knowledge
- **Birthday Circuit**
 - This circuit was made up of multiple AOI logic gates, 3 switches, and a seven segment display.
 - By flipping the 3 switches in a certain order our birthday should appear in this order one digit at a time mm/dd/year
 - A key takeaway from this project is that we learned that by reusing certain signals we can make our circuit appear a lot more clean.

Skills

- Basic HTML
- Basic Python for VEX
